

CALCULATION OF THE CARBON FOOTPRINT OF LASER KEN, S.A.

As a company committed to the environment, Laser Ken, S.A. has joined the fight against climate change, calculating the Carbon Footprint generated by its emissions and working to reduce the greenhouse gases produced by its activity.

With this in mind, in recent years investment has been made in a series of actions for this purpose, such as: the replacement of machinery with new technology machines that reduce emissions while consuming less electricity, the replacement of maintenance of fossil fuels by electricity, use of LED lighting,...

With the goal of achieving a 50% decrease by 2025 from base year 2017, the company continues working action plans oriented along the same lines, incorporating new technology machinery and substituting fossil fuel for electrical appliances, while studying the possibility of incorporating alternative energy sources such as renewable energies. **The base year(2017) emission was 876 tons (scope 1: 18 tons & scope 2: 858 tons). By end of 2021, the emission is 497 tons (scope 1: 22 tons & scope 2: 475 tons). This implies a reduction of 60% in CO2 emission per unit of revenue by 2021 compared to base year 2017.**

With this declaration, Laser Ken, S.A. wants to make public his commitment to the fight against climate change, and his intention to preserve the planet in a selfless way.
